

DRY MIX BELT LOADER

Model CBL-1 (With 200 bbl Silo)

- Loads one yard in just 2-minutes
- Cleaner operation than wet concrete blenders
- Reduced wear parts
- Swinging loading conveyor
- Painted in concrete grey

DRY MIX BELT LOADER

An advanced material loading system built for the trailer-based concrete industry.

SINGLE HOPPER OR DOUBLE HOPPER (CBL 1 or CBL 2)

units are available depending on your specific needs. Double hopper units have the ability to carry multiple aggregate mixes or to blend two different aggregates.

SWING ARM ACTION

allows the conveyor to move in a 120 degree arc and load trailers from different positions.

MULTIPLE TRAILER STAGING

of as many as five trailers. This can save time on a busy day. The swing-arm conveyor can move quickly between the pre-positioned trailers.

HIGH-SPEED BELT

loads a yard of dry concrete material into a rotating drum trailer in two minutes.

DRY MATERIAL DISPENSING

into the mixing trailer drum yields a much cleaner concrete operation.

REDUCED WEAR PARTS

means over \$1,500 in parts replacement cost savings per year over the old wet auger mixers.

WIDE MATERIAL HOPPERS

gives the tractor operator a bigger target during loading and keeps the mess out of the yard. Piles of gravel on the ground are common with older systems.

ADDITIONAL DETAILS:

- Mixtures based upon volume of materials
- Extra wide 8' material hoppers
- 29 inch X 13 foot long swing-arm loading conveyor.
- 6 to 8 cubic yard aggregate storage hoppers.
- 5 or 20 hp. 3 ph. Electric motor (230/460 volt AC 60 amps)
- Multi pump hydraulic system
- 8' or 8'8" aggregate hopper load-over height
- Approximately 300 sq. ft. plant and silo footprint
- 200 barrel cement silo (sold separately)
- EPA approved bag house air cleaner (with silo)
- Portable silo, optional
- 10' dia. Cement silo, 20' high
- Length: 22' (single hopper with conveyor down)
- Width: 8'
- Shipping weight: 6,000lbs
